GEO-MAPS

Background: Geo Location Map reporting of provider directory allows State agencies to manage the plan coverage area. State requires Health Insurance companies to submit data in various formats to access the coverage boundaries for the covered rating area.

Problem: The process is very cumbersome and requires manual intervention in building maps for each provider type and specialties.

Solution: Eixsys developed a powerful tool that efficiently and effectively determines provider network accessibility using geographic data. By using the provider's exact location, our maps create a precise picture of distance and accessibility.

Acute Care Hospitals

- Single provider locations (19)
- ✕ Multiple provider locations (0)
- 30 mile radius
- Bastrop, Hays, Travis, and Williamson Counties

Result: Our Geo Location Map reporting is designed to meet all state requirements to submit Geo maps, regardless of the location of the carrier. Our map reporting also creates precise provider mapping and distance calculations.
